Abstract:

A significant part of the efforts of researchers in Islamic management research is based on qualitative research and based on religious documents and texts. Just as quantitative research with scientific validity and reliability finds scientific value; Qualitative research also requires reassuring elements that have the ability to validate and build trust. This research has used an analytical method that relies on the science of the *osol e feqh* and Islamic philosophy Which has identified the main elements of credibility and trust building in Islamic management research. The main result of this research is identifying the four elements of religious citation, coherence and harmony, correspondence to reality, and efficiency, which can be used in Islamic management research. Each of these elements has criteria for evaluating the main elements that the researcher can use to ensure the value of the research.

keywords:

Validation, Trust Building, Religious Citation, Coherence, Compliance, Efficiency.
