Abstract

In the present study attempts are made to discuss the potentials of knowledge management discipline after accounting for the need for scientific support in humanities development management. To this end, the “descriptive” structure (Mosouf-Sefat) and the “Ezafi” structure (mozaf and mozafoon elayh) of knowledge management and strategic knowledge management are used as a basis to offer four readings that can guarantee the paradigmatic development of knowledge. The results suggest that only an Ezafi structure of strategic knowledge management, i.e. “strategic management on knowledge”, contains a meaning equivalent to “knowledge development management” and can be used to fulfill the needs of Islamic society and the humanities. In the next step, the trend of global knowledge management development is addressed and the significant need for reconstruction and transformation of the knowledge management mission (realization of strategic knowledge management) is discussed. In the “how” section, three main axes needed to transform the knowledge management mission (realization of strategic knowledge management) are introduced and finally, some strategic suggestions are presented to pave the path for scientific support of humanities development management by the strategic knowledge management discipline.

Keywords: Strategic Knowledge Management, Knowledge Management, Knowledge development Management, Humanities development, Islamic Humanities.
