Abstract

One of the fundamental issues of the formation of Islamic humanities is solving its methodological issues. The purpose of this research is to contribute to the scientific movement formed in the direction of Islamization of the humanities, in search of the feasibility, method and conditions of deriving the descriptive and normative propositions of the humanities from the legislative rulings. The results of the research, which was carried out by analytical-descriptive method, show that it is possible to infer descriptive and normative propositions of humanities from legislative rulings, and if the researcher is proficient in the term *ijtihad* of the seminary and has expertise in one of the disciplines of humanities, he can maintain The principles and foundations of Jawaheri's method of jurisprudence to infer descriptive and normative statements of human sciences from legal rulings. The basis of this inference is based on conjecture, and by gathering evidence and leaving the suspect, the level of confidence is increased to the content of conjecture. At the end, some examples of inferred propositions with the mentioned method are presented.

Keywords: Islamic humanities, legislative rulings, inference, descriptive propositions, normative propositions, Islamization of sciences.
